

Since our founding, REC Consultants has built a reputation of providing cost-effective engineering services designed to meet the specific requirements of each client and project. Our strength lies in experience, creativity and versatility and a proven ability to get the job done.

REC's staff of civil engineers prepare both public and private sector projects from concept to construction plans. Our project management personnel are skilled at resolving technical delays and performing production operations that create work plans that are timely in their completion and cost conscious in their design.

Our entire staff understands the complex relationship between designing a build-able project and regulations. Close coordination with all disciplines throughout a project is essential and specifically includes our in-house staff of biologists and surveyors.

### Services we provide
