

REC's survey group is experienced in all phases of survey and mapping services for both private and public sector clients. Utilizing state-of-the-art technology, we provide complete, accurate and cost-effective survey information for time sensitive projects.

All of our survey work is performed by our in-house survey team, outfitted with the latest survey equipment available. This includes the use of Real Time Kinematic GPS equipment, Robotic Total Stations and more. All of which seamlessly interface with the office computer system, to provide fast, efficient and reliable two-way transfer of data between office and field personnel.
